                                                                                                                                                                                                                                                                                   The invention relates to a novel nucleic acid of Arabidopsis thaliana comprising a sequence capable of hybridising under stringency to one of the 999 sequences referred to but not defined in the specification (ABOSB131-ABOSB129). The nucleic acid sequences are useful to identify homologous or related genes, to produce compositions that modulate expression or function of the encoded protein, to map functional regions of the protein, to study associated physiological pathways, to genetically manipulate cells and plants. The encoded products are useful to screen for biologically active agents such as fungicides or
                                                                                                                                                          New nucleic acid sequences of Arabidopsis thaliana and their encoded products are useful to produce transgenic plants, to screen for biologically active agents such as fungicides and insecticides and in genetic studies

The invention relates to novel cat flea (Ctenocephalides felis) nucleic acids which are expressed in hindgut and Malpighian tubule (HMT) tissue or head and nerve cord (HMC) tissue. The invention also relates to the encoded proteins. The invention additionally encompasses expression constructs, recombinant viruses and recombinant cells comprising the nucleic acids of the invention, recombinant production of the proteins, and compositions comprising the inhibitors of the proteins, and compositions comprising the inhibitors of administration to an animal. The nucleic acids, and the proteins they concome may be used in the prevention, treatment and diagnosis of diseases associated with flea infestations. For example, the nucleic acids may be used to produce an HMT or HNC protein according to standard recombinant culturing the cell to express the protein. The HMT and HNC nucleic acids may also be used as DNA probes in diagnostic assays (e.g., PCR) to detect and quantitate the presence of cat flea or other homologous nucleic acid cand quantitate the presence of cat flea or other homologous nucleic acid controlled in mamples. They may also be used to study the expression and cfunction of the proteins and their role in metabolism. The HMT and HNC proteins may be used as antigens in the production of specific cantibodies, and in assays to identify modulacros (aponists may also be used to anti-HMT/HNC protein antibodies and antagonists may also be used to downrequiate protein expression and activity. The anti-HMT/HNC protein antibodies and antagonists may also be used to envire the presence of downrequiate protein expression and activity. The nead as antigens and antagonists may also be used to envirant the presence of downrequiate protein expression and activity. The nead as antigens and antagonists may also be used to envirant the presence of float the presence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  used as diagnostic agents for detecting the presence of flea polypeptides in samples (e.g., by enzyme linked immunosorbent assay (ELISA)). The present sequence represents a cat flea HMT cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; ovarian antigen; ovary; ovarian; breast; cancer; tumour; ovarian cancer; breast cancer; tumour; reproductive system disorder; infertility; pregnancy disorder; anovulation; polycystic ovary syndrome; PCOS; ovarian cyst; dysmenorrhoea; endocrine disorder; infection; inflammatory condition; immune disorder; blood disorder; cardiovascular disorder; respiratory disorder; neurological disorder; gastrointestinal disorder; urinary system disorder; drug screening; gene therapy; chromosome mapping; forensic analysis; antibody preparation; cytostatic; immunomodulatory; neuroprotective; antiinflammatory; gynaecological; reproductive; gene; ss.

C RBP4122B) and to CNAS encoding them (ABD54111-ABD565B), and also encompasses polypeptides 90% identical and polymucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polymucleotides, antibodies against thuman ovarian antigens and the use of ovarian antigen polymucleotides and polypeptides in diagnosing, creenting, prognosing or preventing vary and/or breast related disorders. Such conditions include ovarian antigens, and the use of ovarian or preventing vary and/or breast related disorders (e.g., infertility, disorders of pregnancy, anovalation, polycystic ovary syndrome, ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system constructs infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastifis, oophoritis and vaginitis), immune disorders (e.g., congenital and acquired immunodeficiencies autoimmune oophoritis, systemic lupus erythematosus), confortator disorders (e.g., aneamia), cardiovascular disorders, respiratory disorders. Ovarian antigen polypeptides and urinary system disorders. Ovarian antigen polypeptides and modulate ovarian antigen expression or activity. The polynucleotides may further be used for gene therapy, chromosome mapping, in the condition of individuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies condition of individuals and in forensic analysis, and the polymeral in disease diagnosis, drug targeting and phenotroning mentions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ·,

100-300 amino acids. When mutated the APP gene causes an autosomal dominant form of Alzheimer's disease. APP localises to the cell surface membrane and have a single C-terminal transmembrane domain. Proteolytic processing of APP produces the amyloid beta protein, which is possibly very important in Alzheimer's disease. The invention includes a nucleotide sequence encoding the protease, a vector containing the nucleotide sequence, and a cell line comprising the vector. Methods for screening for inhibitors of beta secretase activity are also given in the invention. The human aspartase protein and nucleotide sequences and the methods for identifying inhibitors of the protease, are useful in the treatment of and research in to Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method for treating a patient diagnosed as having a lower than normal high density lipoprotein-cholesterol (HDL-C) level, a higher than normal trighyceride level, or a cardiovascular disease, involving administering a compound that modulates LXR- or RXR-mediated transcriptional activity or ABCI expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition selected a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a library of human polynucleotides comprising the sequences given in AAZ12532 to AAZ17779. Also described is a method of detecting differentially expressed genes correlated with the cancercus state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell suspected of being cancercus, where the gene product is encoded by one of the 5248 polynucleotide sequences given in AAZ12532 to AAZ1779. The polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels,
determining whether prostate cancer has metastasized in a patient, assessing the aggressiveness or indolence of prostate cancer in a

mapping, tissue typing or profiling, forensics, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polymucleotides can be used for raising antibodises for experimental, diagnostic and therapeutic purposes. The polymucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer). The polymucleotides of the invention are especially used in the diagnosis, prognosis and management of colorectal cancer, breast cancer, and lung cancer. The polymucleotides can also be used to screen for

                                                                                                                                                                                                                                                                                                                                         The sequence of the polycistronic messenger RNA of maize dwarf mosaic virus strain B (MDMV-B) is given in AAT47073 and the encoded MDMV-B polyprotein in AAW10344. New chimaeric genes (see also AAAT47074) comprise a mnoococyledonous plant promoter linked to a modified nucleic acid sequence derived from the MDMV-B genome. The modification is such that mRNA is translated to a truncated protein (pref. smaller than 200 amino acids), no translation of mRNA occurs or the transcribed mRNA lacks the translation initiation codon or includes a premature srop codon. Expression of the chimaeric gene inhibits infection of plants (pref. sorghum, sugarcane, esp. maize) by MDMV. The transgenic plants display an inheritable resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; neuregulin-1 associated gene 1; NRG1AG1; Schizophrenia gene;

NEGLAGIO of the invention. The NEGLAGI gene is also referred to as the human Schizophrenia gene. The invention also relates to fragments or variants of the gene and the NEGLAGI polypeptides they encode. The NEGLAGI nucleic acids and polypeptides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate NRGLAGI expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of NRGLAGI by expressing inactive proteins or to supplement the patients own production of NRGLAGI. Additionally, the gene may be used to produce NRGLAGI polypeptides, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The gene may also be used as culturing the cell to express the protein. The gene may also be used as DNA probes and primers in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The NRGLAGI polypeptides may also be used as antigens in the production of antibodies against NRGLAGI antibodies and antagonists may also be used to activity. Anti-NRGLAGI antibodies and antagonists may also be used to activity. Anti-NRGLAGI antibodies and antagonists may also be used to activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1503900 BP; 452487 A; 281874 C; 288074 G; 480092 T; 1373 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           down regulate expression and activity. Anti-NRG1AG1 antibodies may also be used as diagnostic agents for detecting the presence of NRG1AG1 polypeptides in samples. NRG1AG1 is associated with schizophrenia which may be prevented, diagnosed and/or treated by the above methods.
                                                                                                                                                                                                                                                                                                                                                                                                           Neuregulin-1 associated gene 1 nucleic acids and fragments, useful for preventing diagnosing and treating schizophrenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 46 AGGACACAGATGATTCGGTCCAAGAACAGGATAATAGAACTAAGCAACGCGATACAATTT 105

The invention also relates to fragments or variants of the neurequin.

Gene. The gene and its proteins may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate neuregulin. I expression, such as schizophrenia. For example they may be used to treat disorders associated with decreased neuregulin 1 expression by rectifying mutations or deletions in a patient's genome that affect the activity of neuregulin 1 by expressing inactive proteins or to supplement the patients own production of polypeptides. Additionally, the gene may be used to produce the neuregulin 1 protein, by inserting the mucleic acids into a host cell and culturing the cell to express the protein. The gene and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar culturing the cell cacids in samples, and therefore which patients may be in need of restorative therapy. The protein may also be used as antigens in the production of antibodies against neuregulin 1 and in assays to identify modulators of neuregulin 1 expression and activity. The antibodies and antibodies may also be used to down regulate expression and activity. The antibodies and mattagonists may also be used as diagnostic agents for detecting the presence of neuregulin 1 in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1503900 BP; 452487 A; 281874 C; 288074 G; 480092 T; 1373 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents the human neuregulin 1 gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           46 AGGACACAGATGATTCGGTCCAAGAACAGGATAATAGAACTAAGCAACGCGATACAATTT 105

The FF cells and a substrate of expressed sequence tags (EST). The ESTS are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production potential of the microorganisms to be improved. New genes may be identified and gene copy number variation and stability can be identified and gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in outlure conditions, environmental stress, spore morphogenesis, recombination, metabolic or catabolic pathway engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF07478 to AAF11247 represents ESTs from Fusarium venenatum; AAF11248 to AAF11853 represents ESTs from Aspergillus niger; AAF11854 to AAF14878 represents ESTs from Aspergillus oryzae; and AAF14879 to AAF15337 represents ESTs from Trichoderma reesei, which are The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from all specifically claimed in the present invention.

The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV52524)

recorded on it, or a representative fragment or a sequence at least 95% identical to SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391 (AAV52134 to AAV52524) are genomic fragments from Streptoroccus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule encoding a process comprising: (a) screening of a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the isolating the nucleic acid molecules from the members; or (b) isolating many which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating molecules whose nucleotide sequence is homologous to amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome to prime systemsian modulating fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2357 ACCAAAAGGATTGTTTGATAAGCTACTTTCTGTCTCTAACAATTCCCTAGCTTGATCCGA 2416

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3466 CAGCACAATGATGTTTTTATGACTGAATTAGAGAATAGAACCAAAAAACGTGTTACGTTA 3525

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL016175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
```

```
The present invention provides a number of coding sequences and proteins, the over-expression of which is associated with ovarian carcinoma/cancer. These can be used in the diagnosis, treatment and prevention of ovarian cancer, optionally by gene therapy or in the form of a vaccine. The present sequence is an example of one of these sequences.
                                                                                                                                                                                                                                                                                                                                                  Isolated polypeptides associated with ovarian carcinomas, and the nucleic acids that encode them, useful for the prevention diagnosis and treatment of ovarian cancers -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ovarian cancer; ovarian carcinoma; gene therapy; immunotherapy;

Polypeptides and polynucleotides of the invention are useful for detecting a cancer in a patient, for stimulating and/or expanding T-cells specific for a tumour protein, and for inhibiting the development of a cancer in a patient. They are also useful for stimulating an immune response in a patient, and for treating a cancer in
                                                       The present invention provides human ovarian cancer associated proteins and coding sequences. The sequences can be used in the diagnosis and treatment of ovarian cancers. The present sequence is a coding sequence
 pharmaceutical compositions, e.g. vaccines, for treating ovarian cancer

The isolated polynucleotides of the invention are useful for their ability to selectively form duplex molecules with complementary stretches of the entire desired gene or gene fragments, and for designing and preparing ribozyme molecules for inhibiting expression of tumour polypeptides in tumour cells. Polypeptides and polynucleotides of the invention are also useful in recombinant DNA molecules to direct expression of a polypeptide in appropriate host cells. The sequences given in records ABL489760-ABL48956 represent polynucleotides encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 74 GITAAAINCNGGGACNCCITACAAITGIGTAAANAACAIGCNCANAAACAIATGCATATA 133

                                      gene that codes for a novel protein (see AAW43301), designated Afclp, that mediates the removal of AAX tripeptide from CAAX proteins following prenylation. AFCI was isolated using an autocrine arrest, sensitised selection for CAAX proteases. This involved coropic expression of an a-factor in an a-cell and a CAAX permutation defective for proteelysis. Of 127 mutants isolated, 22 had mutations in a single gene (AFCI). This is the first CAAX protease to be identified. Genetic knockout of AFCI resulted in incomplete reduction of a-factor production; thereby exposing the presence of a second CAAX protease. The gene for this (see AAV17602) was named RCBI (Ras and a-factor converting enzyme). Vectors comprising the AFCI or RCBI gene, polypeptides encoded by such vectors and recombinant cells transduced with the vectors and become for inhibitors of prenylation which can be used in the treatment of Ras dependent cancers such as colorectal and exocrine pancreatic carcinomas or myeloid leukaemia.
                                                                                                                                                                                                                                                                                                     GGTCCAAGAACAGGATAATAGAACTAAGCAACGCGATACAATTTGGGTGGATTGGCAACA 121

The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Brahhamella catarrhalis) is a large aerobic, gram-negative diplococcus, normally found among the bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Genomic library; bacteria; human upper airway; otitis media; sinusitis;

The proteins have antibacterial and antiinflammatory activity. (I), mucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to li). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic
flora of human upper airways. M. catarrhalis is known to cause acute, localised infections such as otitis media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; gene; antiinflammatory; infection; vaccine; meningitis; gene therapy; ds.

The invention relates to novel isolated human prostate cancer antigen polynucleotides (I) and polypeptides (II). (I) and (II) are useful for admening, treating or ameliorating a medical condition when administered. (I), (II) and the antibody to (II) are useful for treating preventing and/ or prognosing disorders related to the reproductive nephritis; and blood-related disorders og. thrombosis. (II) can be used for testing and detection e.g. as a chromosomal marker and in forensics. (I) and the anti-(II) antibody can be used in testing and detection in antigen coding sequences, and related PCR primers and sequences antigen coding sequence data for this patent did not form

The invention relates to novel isolated human prostate cancer antigen polymuclectides (I) and polypeptides (II). (I) and (III) are useful for preventing, treating or ameliorating a medical condition when administered. (I), (II) and the antibody to (II) are useful for treating, preventing and/ or prognosing disorders related to the reproductive system including prostate cancers; urinary disorders e.g. chronic nephritis, and blood-related disorders e.g. thrombosis. (II) can be used for testing and detection e.g. as a chromosomal marker and in forensics. (I) and the anti-(II) antibody can be used in testing and detection in immunoassays. AAS40061-AAS4075 represent the human prostate cancer antigen coding sequences, and related PCR primers and sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at: ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the reproductive system including prostate cancer and also for testing and detection e.g. diagnosis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         343 ACCACTGGTTTATGATAATCTAGGTGCCAGATGATGGTGTCTTAGGTCAGGGTGAAAGCA

The invention relates to novel isolated human prostate cancer antigen polymucleotides (I) and polypeptides (II). (I) and (II) are useful for polymucleotides (I) and polypeptides (II). (I) and (II) are useful for preventing, treating or ameliorating a medical condition when administered. (I), (II) and the antibody to (II) are useful for treating, preventing and, or prognosing disorders related to the reproductive system including prostate cancers; urinary disorders e.g. chromic neptritis, and blood-related disorders e.g. thrombosins. (II) can be used for testing and detection e.g. as a chromosomal marker and in forensics. (I) and the anti-(II) antibody can be used in testing and detection in immunosassays. AAS40061-AAS40775 represent the human prostate cancer antigen coding sequences, and related PCR primers and sequences of the invention. Note: The sequence data for this patent did not form invention. Note: The sequence data for this patent did not form the printed specification, but was obtained in electronic format cancer and invention are fifp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                              .

Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition

Disclosure; SEQ ID NO 9243; 1297pp + Sequence Listing; English.

The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.

Sequence 415 BP; 114 A; 116 C; 62 G; 123 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                343 ACCACTGGTTTATGATAATCTAGGTGCCAGATGATGGTGTCTTTAGGTCAGGGTGATAGCA 284

Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing
                                                                                                                                                                                                                    DNA encoding the signal peptide associated with the BBRP42 gene of B. brevis may be incorporated into an expression vector, pref. with the promoter sequence and transcription control region as indicated in the features. DNA encoding a foreign protein may be ligated immediately downstream of the signal region. The vector may then be used to transform a host organism which then expresses the protein on culture. BRRP42 is secreted by B. brevis during an early stage of incubation, and so its associated signal peptide allows a foreign protein to be secreted during this early stage when protease prodn. is low, thus increasing recovery of the protein. Proteins for which the method may be used include interferon, interleukin, human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and
                                                                                                                                                                                                           These
                                                                                                                                                                The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 GCTCGAGCCATGGTATGGACGTATACGAGTTCTTGGTCAATTTCCAGGACACAGATGATT 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Drosophila; developmental biology; cell signalling; insecticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Drosophila melanogaster genomic polynucleotide SEQ ID NO 15421.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence is that of a coat protein gene of barley mild mosaic virus (BaMMV). The determ. of the genetic structure of BaMMV coat proteins may contribute to the diagnosis of the virus which causes barley yellow mosaic disease, as well as to the prodn. of yellow mosaic-disease, as well as to the prodn. of yellow mosaic-disease resistant barley utilising BaMMV coat protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA

These sequences from the Coryneform bacterium, on a gene derived from a mutant of coryneform bacterium, measuring expression amount and amalyshing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nutamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Db 295126 GCATTACCCAGGGGCATTGGTGCATACCAGGTCAAGGTAAATGTCGAGGACGCACTGAGCGCA 295067

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or poly4+ RNAs derived from 30 different tissues. ESTs sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the same obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain
                                                                                                                                                                                                                                                                                                                          sequence tag; secreted protein; cDNA isolation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         69 GAACAGGATAATAGAACTAAGCAACGCGATACAATTTGGGTGGATTGGCAACAAACTTCC 128
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        217 CTIGITGICAACACAGAIGAICCCCAGGICAAATIICIGCACTCCTAAAATCCICCTIAC 158

This invention describes novel nucleic acid sequences (A) that are expressed at high level in normal prostatic tissue. Polypeptides (I) percoded by (A) are used. (a) for identifying agents for treatment of prostatic cancer and (b) for therapy of prostate cancer, optionally where expressed by gene therapy methods. (A) is also used to isolate full-length genes (for gene therapy) and for recombinant production of (I), which can be used to raise specific antibodies. (A) are identified by assembly of ESTs (expressed sequence tags) before these are analyzed for expression pattern (tissue specificity). This approach eliminates many of the false results, as regards tissue specificity, associated with known methods that use single (usually short) ESTs. AZ33477-Z33540 represent expressed sequence tags described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acid expressed at high level in normal prostatic tissue and encoded polypeptides, used to treat cancer and screen for therapeutic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0;
                                         Ferritin 14 protein; DNA recombination; antagonist; malignant tumour; haemopathy; HIV infection; immunological disease; inflammation; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel ferritin 14 protein, the encoding polynucleotide, the production of the polynucleotide using DNA recombination, and an antagonist against the polynucleotide. The polynucleotide of the invention is useful for curing diseases such as malignant tumours, haemopathy, HIV infections, immunological disease and various inflammations. This polynucleotide sequence represents the CDNA encoding the ferritin 14 protein of the invention.

antidabetic; oftostatic; neuroprotective; antidepressant; nockropic; antidabetic; oftostatic; neuroprotective; antidepressant; nockropic; antiparkinsonian; and immunostimulant. The proteins and polymucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphlaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, osteoporosis, severe combined immunodeficiency, eczema, allergic rhinitis, asthma, diabetes, cancer, multiple sclerosis, depression, Alzheimer's disease, Parkinson's disease, neurodegenerative and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAH99166 to AAH99904 encode the human proteins given in AAM25225 to AAM25931. The proteins can have activities based on the tissues and cells they are expressed in, such as: antinflammatory; antirhoumatic; antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; central nervous system; virucide; anti-HIV; fungicide; antimutagen; cardiovascular; antianaemic; antiaggregant; haemostatic; vulnerary; antiulcer; osteopathic; dermatological; antiallergic; antiasthmatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      503 crigirigicaacacagargarccccaggicaaarircrgcacrccraaaarccrccrrac 562

(RetinaXR) polypeptide with antidiabetic, anorectic, ophthalmological, antigout, antinflammatory and immunostimulant activity. RetinaXR is useful for screening a compound for its ability to inhibit or activate RetinaXR nuclear receptor, as a diagnostic agent for diagnosing patients having a predisposition to diabetes and/or obesity, for monitoring patient's response to treatment of diabetes or obesity, for treating a subject having a disorder that is responsive to RetinaXR receptor modulation e.g. diabetes, obesity and age-related macular degeneration, for treating retinopathies e.g. diabetic retinopathy, conjunctivitis, DiGeorge's syndrome, retinitis pigmentosa, neovascular glaucoma, corneal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      *tag= b 'note= "Encodes the amino-terminal A/B domain, claim 11"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, RetinaXR, antidiabetic, anorectic, ophthalmological, antigout, antiinflammatory, immunostimulant, nuclear receptor; diabetes; obesity, age-related macular degeneration, retinopathy, conjunctivitis, gout, bigeorge's syndrome, retinitis pigmentosa, neovascular glaucoma, corneal inflammation, severe combined immunodeficiency disease; SCID;

inflammation, severe combined immunodeficiency disease, gout, defantacmyositis, etc. Nucleic acids encoding RetinaXR are also useful for treating the above mentioned disorders by gene therapy. The present sequence is that of the RetinaXR encoding CDNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a consensus RACE sequence of human retinal orphan nuclear hormone receptor variants heetinOR2 and heetinOR1. The two heetinOR polynucleotides are identical, except that heetinOR2 includes a 40 bp insertion following nucleotide 1188. This insertion, which is due to a mRNA splicing variation, introduces a stop codon into polypeptide. The polynucleotide, which results in a truncated heetinOR2 polypeptide. The polynucleotides are expressed only in the retinal tissues. The nuclear hormone receptors are found in retinal cells, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              are useful for identifying ligands that can modulate their activity and for identifying response elements that are responsive to the nuclear hormone receptors. The receptors and methods are useful for research of

```
The present sequence encodes a human retinal orphan nuclear hormone receptor variant, designated hRetinOR1. The specification also describes variant hRetinOR2. The two hRetinOR polynucleotides are identical, except that hRetinOR2 includes a 40 bp insertion following nucleotide 1188. This insertion, which is due to a mRNA splicing variation, introduces a stop codon into the hRetinOR2 polynucleotide, which results in a truncated hRetinOR2 polypeptide. The polynucleotides are expressed only in the retinal tissues. The nuclear hormone receptors are found in retinal cells, and are useful for identifying ligands that can modulate their activity and for identifying response elements that are responsive to the nuclear hormone receptors. The receptors and methods are useful for research of hormone-mediated

```

```
The present sequence encodes a human retinal orphan nuclear hormone receptor variant, designated hRetinOR2. The specification also describes variant hRetinOR1. The two hRetinOR polynucleotides are defentional, except that hRetinOR2 includes a 40 bp insertion following nucleotide 1188. This insertion, which is due to a mRNA splicing variation, introduces a stop codon into the hRetinOR2 polynucleotide, which results in a truncated hRetinOR2 polypeptide. The polynucleotides are expressed only in the retinal tissues. The nuclear hormone receptors are found in retinal cells, and are useful for identifying ligands that can modulate their activity and for identifying response elements that are responsive to the nuclear hormone receptors. The receptors and methods are useful for research of hormone-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human retinal nuclear hormone receptor and coding sequences, useful for identifying ligands and response elements involved in homeostasis

The two hRetinOR polynucleotides are identical, except that hRetinOR2 includes a 40 bp insertion following nucleotide 1188. This insertion, which is due to a mRNA splicing variation, introduces a stop codon into the hRetinOR2 polynucleotide, which results in a truncated hRetinOR2 polynucleotides are expressed only in the retinal tissues. The nuclear hormone receptors are found in retinal cells, and are useful for identifying ligands that can modulate their activity and for identifying response elements that are responsive to the nuclear hormone receptors and methods are useful for research of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human retinal nuclear hormone receptor and coding sequences, useful for identifying ligands and response elements involved in homeostasis -

The recombinant multivalent vaccine is formed by inserting multiple genes such as a feline panleukopenia virus (FPV) gene, and/or a feline calcivirus (FCV) capsid protein gene each operably linked to a promoter, into a raccoon poxvirus for expression. The present sequence is Feline calcivirus (FCV) capsid protein encoding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CRFK cells were inoculated, total poly-A+ RNA was isolated and FCV double-stranded RNA was LiCl fractionated from this RNA. Double-stranded cDNA was prepared, blunt-ended with t4 DNA polymerase and treated with EcoRI methylase prior to ligation of EcoRI linkers. The treated with EcoRI methylase prior to ligated to lambda gtl0. E.coli mixture was digested with EcoRI and ligated to lambda gtl0. E.coli strains transformed with the viral vectors were plated and positive plaques were transferred to nitrocliulose. They were probed with a random-primed cDNA prepared from FCV genomic RNA. A plaque with a strong hybridisation signal was isolated and found to contain an a second library was constructed in pUC18 to give pCV2. EcoRI fragment (ca.4200bp). It was cloned in pUC18 to give pCV2. These two plasmid was selected from this library and designated pCV7. It was conduct to have restriction sites in common with pCV2. These two plasmids were used to isolate other regions of the FCV genome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        55 ATGATTCGGTCCAAGAACAGGATAATAGAACTAAGCAACGCGATACAATTTGGGTGGATT 114

The present DNA shows the transferrin receptor (TfR) operon consisting of two genes (Tpp1 and Tbp2) arranged in tandem and which are transcribed trom a single promoter, from Haemophilus influenzae type b, strain MinnA. H. influenzae TfR is iron- and/or haemin-regulated and a putative furble binding site has been identified upstream of tbp2. Antibodies blocking this binding site may prevent bacterial growth. Fragments of the TfR (or its genes) are useful in vaccines to provide protection against, e.g. bacterial meningitis. An advantage of using the TfR is that it shares homology with TfR of other H. influenzae strains including non-typable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1579 İTCTİATİAGGİCACGIACİCCCAAĞĞACĞACAİACÇIAAAACAĞĞAAĞIGCAAAAİA 1638

Hemophilus influenzae type b, strain MinnA. The bacterial transferrin receptor is composed of 2 chains, Topl and Top2. Hinfluenzae is a non-typable bacterium responsible for a wide range of human diseases. Iron is an essential nutrient for the growth of these of human diseases. Iron is an essential nutrient for the growth of these bacteria, and they can utilise human transferrin as a source of iron. Antibodies which block the access of the transferrin receptor to its iron source prevent bacterial growth. The transferrin receptor, or fragments, therefore, are good vaccine candidates. The Holl length Top2 protein is produced in low amounts in Escherichia coli. However, the yield can be enhanced by truncation of the 3' end of the gane. An immunogenic composition comprising (or encoding) the immunogenic truncated analogue can be used to induce protection against a disease caused by a bacterial pathogen that produces the transferrin receptor. The immunogenic truncated analogue is also useful as an antigen in immunoassays for the detection of Haemophilus transferrin receptor antibodies, while the nucleic acid molecule can be used as a manigen in immunoassays for the detection of theme produced as a manigen in immunoassays for the detection of tender transferrin receptor
                                                                                                                                                                                                                                                                                                                                                    Transferrin receptor; Haemophilus influenzae type b;

The proteins encoded from these genes can be expressed in a recombinant host. The proteins can be used in vaccines against H. influenzae infections or to produce antibodies for use in diagnosis or passive

                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel isolated and purified nucleic acid (I) encoding an immunogenic, C-terminally truncated analog of one of the transferrin receptor proteins Tbp1 or Tbp2 of Haemophilus influenzae which has antibacterial activity. (I) are used for recombinant production of truncated Tbp; as probes and primers for detecting, and diagnosing infection by, Haemophilus, also for isolating similar sequences from other bacteria; as immunogens for vaccinating against infections caused by bacteria that produce transferrin receptors, e.g. infections caused by bacteria that produce transferrin receptors, e.g. Haemophilus, Neisseria or Branhamella. The truncated proteins are useful as immunogens (as above); for diagnosing infection (as antigens in immunoassays) and for raising antibodies, used for diagnosis of infections or for passive immunization. This sequence encodes the transferrin receptor proteins Tbp1 and Tbp2 isolated from H. influenzae
                                                                                                                                                                                                                                                            Transferrin receptor; Tbp1; Tbp2; immunogenic; antibacterial; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid encoding truncated transferrin receptor, useful for diagnosis, treatment and prevention of bacterial infections, particularly by Haemophilus

specific for single transferin receptor proteins (or immunogenic fragment) from strains of Haemophilus influenzae. This sequence fragment) from strains of Haemophilus influenzae. This sequence for the Topi and Topi transferin receptor proteins from H. influenzae type B strain MirnA. The antibodies may be used for preventing and treating inflections and disorders caused may be used for preventing and treating influenzae including bacterial meningitis, othics media. By H. influenzae, including bacterial meningitis, othics media, be used detect the presence of H. influenzae proteins in samples according to standard methodologies (e.g. enzyme linked immunosorbant assay (ELISA)) and hence diagnose infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antibodies specific for transferrin receptor proteins of Haemophilus influenzae, useful for treating otitis media, epiglottitis, pneumonia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to novel antibodies (or monospecific antisera)

H. influenzae TfR is iron- and/or haemin-regulated and a putative furbinding site has been identified upstream of tbp2. Antibodies blocking this binding site may prevent bacterial growth. Fragments of the TfR (or its genes) are useful in vaccines to provide protection against, e.g. bacterial meningitis. An advantage of using the TfR is that it shares homology with TfR of other H. influenzae strains including non-typable

The bacterial transferrin receptor is composed of 2 chains, Tbp1 and Tbp2. Hinfluenzae is a non-encapsulated or non-typable bacterium responsible for a wide range of human diseases. Iron is an essential nutrient for the growth of these bacteria, and they can utilise human transferrin as a source of iron. Antibodies which block the access of the transferrin receptor to its iron source prevent bacterial growth. The transferrin receptor, or fragments, therefore, are good vaccine candidates. The full length Tbp2 protein is produced in low amounts in Escherichia coli. However, the yield can be enhanced by truncation of the 3' end of the gene. An immunogenic composition comprising (or encoding) the immunogenic truncated analogue can be used to induce protection against a disease

This invention describes a novel isolated and purified nucleic acid (I) encoding an immunogenic, C-terminally truncated analog of one of the transferrin receptor proteins Tbp1 or Tbp2 of Haemophilus influenzae which has antibacterial activity. (I) are used for recombinant production of truncated Tbp; as probe and primers for detecting, and diagnosing infection by, Haemophilus, also for isolating similar sequences from other bacteria; as immunogens for vaccinating against infections caused by bacteria that produce transferrin receptors, e.g.

 Haemophilus, Neisseria or Branhamella. The truncated proteins are useful
              as immunogens (as above); for diagnosing infection (as antigens in immunoassays) and for raising antibodies, used for diagnosis of infections or for passive immunization. This sequence encodes the transferrin receptor proteins Tbp1 and Tbp2 isolated from H. influenzae
                                                                                                                                                                                                      1627 TICTTATTAGGTCACCGTACTCCCAAGGACGACATACCTAAAACAGGAAGTGCAAAATAT 1686

ö
corresponds to the coding sequences for the Tbp1 and Tbp2 transferrin receptor proteins from H. influenzae type B strain Eagan. The antibodies may be used for preventing and treating infections and disorders caused by H. influenzae, including bacterial meningitis, otitis media, epiglottiis, pneumonia and tracheobronchitis. The antibodies may also be used detect the presence of H. influenzae proceins in samples according to standard methodologies (e.g. enzyme linked immunosorbant assay (ELISA)) and hence diagnose infections.
                                                                                                                                                                                                                                                                                                                1627 TICTIATTAGGTCACCGTACTCCCAAGGACGACATACCTAAAACAGGAAGTGCAAAATAT 1686

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to chemically pre-treated DNA of genes associated with apoptosis. The nucleic acids are used to allocate patients for specific therapy for HV infection, Bloom syndrome, cardiopathy, aging, neurodegenerative disorders, Herpes simplex virus infection, renal ischaemia, amyotrophic lateral sclerosis, solid tumours and cancers. This nucleotide sequence represents a chemically treated apoptosis gene. Even SEQ ID numbers are the complementary DNA strands to the odd SEQ ID numbers. The sequence data for this patent is not represented in the printed specification but is based on
                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chemically modified sequences of genes associated with apoptosis are useful to determine methylation patterns of genomic DNA samples for diagnosis of associated diseases such as cancer \,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2559 İGTİTTAAAAATAİTAĞTAATAATAATAAATİTTAAAATTATAAAATATİGATAGGGAAA 2618

                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

method comprises modifying a consensus splicing site in (I). Also described in the present invention are: (1) isolated nucleic acid (Ia) containing a feline calicivirus (FCV) C gene with at least one modified or deleted consensus splicing site; (2) recombinant nucleic acid (II) comprising (Ia) fused to a sequence (III) encoding a polypeptide (IV); (3) vector that can express (I) in the nucleus of eukaryotic cells; and (4) cultures of cells infected with this vector. (II) and the vector of (3) are used in vaccines, specifically to treat or prevent FCV infections. Altering the splicing sites allows coding sequences to be transcribed in the nucleus of eukaryotic cells without alteration by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the cells' natural splicing machinery, i.e. without changing the amino acid sequence of the expressed product. The present sequence represents Feline calicivirus strain FCV 2280 capsid gene from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A method has been developed for the production of an isolated nucleic acid (I) that can be transcribed naturally in the cytoplasm of eukaryotic cells, without being altered by the splicing machinery. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     68 AGAACAGGATAATAGAACTAAGCAACGCGATACAATTTGGGTGGATTGGCAACAAACTTC 127
